Parker Racor Village Marine Tec's new LT Series Watermakers

Stock Symbol: PH - NYSE

Gardena, California, March 15, 2010 - Racor Division of Parker Hannifin Corporation, the global leader in motion and control technologies, is pleased to announce the release of a new series of watermakers for marine applications globally. The LT Series desalinators offer fresh water independence for ocean crossings, extended voyages, or cruising where dock water supplies are unreliable. The LT Series is designed for end-users and fleet operators who require reliable fresh water production from a simple to operate watermaker system. The LT Series is available in various models with capacities from 400-1800 GPD. The frame is compact and can be mounted above or below the water line in a vessel. The units feature a semi-modular frame format for installation flexibility, i.e. the boost pump and pre-filters are supplied as loose items.

Features and benefits include: compact stainless steel high pressure pump head that is resistant to the corrosive seawater environment; sediment pre-filter with a 5-micron rating, magnetic drive low pressure pump which never requires seal replacement; glycerin-filled pressure gauges; flow meters to monitor freshwater production; freshwater flush system and optional timed automatic flush with adjustable interval & duration for set-and-forget flushing; 316 stainless steel pressure regulator is adjustable to allow operation in brackish or fresh water; electrical control panel NEMA 4X with motor starter and pump controls; automatic diversion valve that diverts water to discharge if water quality drops below acceptable standards; and a digital water quality monitor which displays the purity of product water output. For more information, please see bulletin number 7935.

The leading specialist in the watermaker technology to the USCG, US Navy, and others, for over 30 years, Racor Village Marine Tec. is dedicated to serving the fresh water needs of mariners.
