

Dear Valued Customers & Channel Partners,

It's with great pleasure that we inform you today of our successful relocation to our new expanded, upgraded manufacturing facility in Carson California, USA. The new 120,000- square-foot facility has enabled us to scale up in manufacturing output and is expected to meet all of our operational needs for the foreseeable future.

The new facility includes fully-fitted production area, offices, laboratories, full functioning wet test area, R & D facilities, conference rooms and executive meeting areas and houses both Parker Sea Recovery and Parker Village Marine Tech Government and non-Government business Units. Our new facility will serve three separate market verticals each with dedicated Business Unit Leaders, Engineering and Operational teams and is aligned to our current markets of interest with focus on customer satisfaction.

The position of Business Unit Manager for the Leisure market segment is currently vacant as we search for a suitable candidate.

Best regards
Henrik Wendelboe
Parker Water Purification
